SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT UNDER 37 CFR 1.97(c)

Commissioner for Patents
Washington, D.C. 20231

Sir:

To comply with the Applicant's duty under 37 CFR § 1.56, the following information is brought to the attention of the Examiner, in addition to the information that has been submitted before with Applicant's response submitted on March 9, 2001. In that response, Applicant identified for the Examiner, certain references that may be of interest. Applicant wishes to draw the Examiner's attention to an additional reference (U.S. Patent No. 4,850,007 to Marino et al.) that may also be of interest. That reference is directed to a telephone toll service with advertising. In their patent, Marino et al. disclose keeping a record (profile database 26) for each caller, but that record does not reflect prior use of the system. The profile database merely contains categories of subjects of interest to the caller and background information that would be of assistance in selecting advertisements for the caller.

As general background information, Applicant wishes to bring the following information to the Examiner's attention.

Certain patents that issued to the Applicant possibly are either parents of, or otherwise related to the present application, and furthermore have had involvement with litigation. After consultation with the Solicitor's Office at the U.S. Patent and Trademark Office, Applicant has brought information with respect to the involved litigation to the Patent Office's attention in Applicant's

other cases in the manner suggested by the Solicitor's Office. In that regard, several attachments (that include comments) and exhibits (identical copies) have been provided to the Patent Office in Applicant's related cases (for example, U.S. Serial Nos. 08/306,456 and 08/306,751) as indicated below along with supplemental comments. A description of the various attachments and exhibits follow. Additional copies of attachments and exhibits (Volumes I and II) are provided with this document. Copies of all of the art is not submitted to avoid burdening the Examiner and the Patent Office with excessive paper. Certain copies are provided that are discussed later.

1. LIST OF ATTACHMENTS

(Court Paper Lists and Attachments)

Note: Summary lists of litigation papers filed and/or served in cases relating to certain patents are provided for each of the litigated cases, designated here as Suit I (*First Data Resources (hereafter "FDR") v. West Interactive Corporation*¹), Suit II (*RAKTL and MCI v. AT&T Corp. (hereafter, "AT&T"), Universal Card Service Corp. (hereafter "UCS"), and AT&T American Transtech, Inc. (hereafter "Transtech")*²), and Suit III (*RAKTL v. Microvoice*)³ (see Attachments A, B, and C, respectively). Generally, many such litigation papers were designated under a protective order and consequently, although Applicant's litigation counsel had access to them, Applicant's prosecution counsel (Mr. B.G. Nilsson and Ms. Reena Kuyper) were not approved for access. Under the terms of the protective order in Suit II, litigation counsel could not actively participate in prosecution matters.

It also is noteworthy that many of the papers were directed to procedural matters that are substantively unrelated to the patents, as: scheduling, generic form allegations, evidentiary issues, and so on.

¹ See Attachment A, Suit I Summary of Papers Filed in Court or Served on Either Party in Suit (*First Data Resources v. West Interactive Corporation*).

² See Attachment B, Suit II Summary of Papers Filed in Court or Served on Either Party in Suit (*RAKTL and MCI Telecommunications Corporation (hereafter "MCI" now MCI Network Services ("MWNS")) v. AT&T Corp. (hereafter "AT&T"), AT&T Universal Card Service Corp. (hereafter "UCS") and AT&T American Transtech, Inc. (hereafter "Transtech")*).

³ See Attachment C, Suit III Summary of Papers Filed in Court or Served on Either Party in Suit (*RAKTL v. Microvoice*).

Suits I and III were resolved by defendants taking a license. Regarding Suit II, which proceeded to a stage far more advanced than attained by either of Suits I or III, numerous papers have addressed claim terms and proposed definitions for such claim terms. Indicating resolution of such terms, an attachment (*see* Attachment B1) is provided setting out claim terms as defined by the Court as a result of a Markman Hearing.⁴

Suit II was also resolved in December of last year by the defendants (AT&T and UCS) taking a license. The defendant Transtech has settled but Applicant does not have liberty to disclose the terms of the settlement agreement with Transtech. During the course of Suit II, as part of discovery, the defendants variously produced an enormous amount of documents (about 1 million or so as indicated by Applicant's litigation counsel) presumably of possible interest to various litigation issues such as infringement etc. These documents apparently include patents, non-patent publications, published articles, news releases, equipment specifications and so on. Most of the produced documents were marked "CONFIDENTIAL." The documents were produced under a Protective Order of the Court, specifying limited use of the documents and confidentiality for documents so designated. They were frequently mismarked. Accordingly, neither Applicant nor Applicant's prosecution counsel has had access to these documents. It is understood from Applicant's litigation counsel that perhaps only at the outset was the entire production quickly reviewed in a "flash cut" with a view to determine if any of the documents are pertinent from a prior art standpoint. A more comprehensive review of all the documents from that viewpoint was not undertaken as discovery relating to validity and infringement issues was deferred in part by the judge to follow claim interpretation to be resolved at a Markman Hearing.

As part of the discovery leading up to the Markman Hearing, the defendants filed their invalidity contentions that identified and purported to apply prior art to a select number of claims (20). Defendants also identified select prior art in their responses to Applicant's interrogatories. After the Markman hearing, litigation counsel analyzed the potential prior art provided by defendants and related materials of interest with respect to select claims in suit.

⁴ A Markman Hearing occurred in Suit II, *Ronald A. Katz Technology Licensing, L.P. and MCI Telecommunications Corp.*, Civil Action No. 97-4453 (USDC, ED PA) and Ruling was issued (See Attachment B2 and Exhibit BI).

However, those materials were generally designated as 'CONFIDENTIAL' under the protective order and were not available to Applicant's prosecution counsel for review.

Applicant's litigation counsel have attempted to clarify what information cited by defendants during the litigation could be provided to Applicant's prosecution counsel for use in prosecution matters. To date, those discussions now have resulted in an understanding by litigation counsel that patents and certain published information (as best ascertained by the litigation counsel) provided by the defendants may be used by Applicant in prosecution matters. Some of these documents remain unavailable to Applicant's prosecution counsel.

Applicant's prosecution counsel have briefly reviewed the U.S. patents and have provided brief explanations below in CHARTS A, A1, and B with preliminary distinctions (see PTO Forms 1449, Supplemental V (cited by either AT&T or UCS or both only), Supplemental VA (cited only by Transtech) and Supplemental VI (accumulated by Applicant from other sources).

Applicant's prosecution counsel have also reviewed published documents provided by the defendants (when stacked about 5 feet in height and cited in PTO Forms 1449, see Supplemental VII) and have provided brief explanations here. For the Examiner's convenience, an extra copy of the set of forms PTO-1449 (Supplemental V, VA, VI, and VII) are attached hereto, so the Examiner can initial the references to indicate his consideration.

It should be noted that this stack of published documents includes duplicates and references that are clearly not pertinent to the Katz portfolio, for example, references reporting the Mexican earthquake, basketball etc. Also, many of the documents address financial or business considerations or are simply cryptic news stories taken for example from LEXIS-NEXIS service. Generally, the documents fall into subject categories such as private branch exchange (PBX) switches, voicemail components, ANI services per se, DNIS services per se, 800 and 900 service per se, ISDN operations, telephone billing and routing techniques, voice processing, and telephone technology generally. In reviewing the stack of published documents, none were located which were found to be pertinent to the present application or related applications generally. Accordingly, Applicant is not providing copies of all the references at this point. However, copies of a select few to represent the nature of the citations are being provided (further discussed at pages 72-74 here). In the event the

Examiner would like copies of everything or other select items, the Examiner is respectfully requested to advise the undersigned.

Applicant's prosecution counsel have reviewed other documents asserted by AT&T when adverse to the Applicant. These documents were released for review and forwarded to Applicant's prosecution counsel on January 11, 2001. The accompanying Forms PTO-1449 (designated as Supplemental VIII) provide a listing of documents (References B-M) that AT&T had possibly asserted as prior art when adverse to the Applicant. AT&T has now indicated these documents are non-confidential, thereby allowing Applicant's prosecution counsel to access them. On reviewing these documents, Applicant's prosecution counsel do not believe any of them are of much interest to the claims of this application. Nonetheless, CHART C (pages 74-75) lists all the documents and indicates short comments relating to each. A copy of each of these documents is provided because they are representative of articles and publications available from Bell Labs. An additional document (copy attached) on AT&T's network communications that Applicant's prosecution counsel recently came across is also cited on another Form PTO-1449 (designated as Supplemental IX).

In another regard, with respect to the Suits, certain claim terms have been the subject of interrogatories and related responses along with other subjects as: claim support in specifications, priority dates, specification background comments, proposed language interpretations, document authorship, and other matters of fact.

Document requests have addressed: potentially infringing systems, factual aspects of the Parties and other subjects. In addition to scheduling matters, evidentiary questions and discovery, court papers also have addressed the Markman Hearing, which is treated below and in certain attachments.

Invalidity contentions (see Exhibits AI (by West), BII (by AT&T), and BIII (by UCS)) also were expressed during the pretrial phase of Suit I and Suit II. Although the defendant Transtech also expressed its invalidity contentions, it had denied Applicant permission to disclose them to the Patent Office until a Judge's ruling issued during the first week of January 2001. At any rate, those contentions in Suit II (RAKTL and MCI v. AT&T Corp., et al.), however, were based on a construction of the claims being advanced by defendants at the time. **That proposed claim construction was largely not the one**

ultimately adopted by the Court in its Markman decision. Defendants were not required to update those contentions based on the Court's Markman ruling before Suit II was settled. Applicant and MCI do not agree with the rejected contentions of defendants, as set forth in their responsive contentions.

Further related to the Markman Hearing (*see* Suit II), several demonstrative exhibits were presented. Such demonstrative exhibits from the Plaintiff were provided as a teaching tool and showed claims and drawings from the patents along with background information. Defendants' demonstrative exhibits addressed: telephone systems, patent drawings, drawings from references showing elements and prosecution history comments.

The following attachments and exhibits including those identified above and additional ones summarize the substance of Suits I, II, and III that remotely may be of possible interest to patent prosecution.

Forms PTO-1449 listing art cited by Defendants (Transtech)

Supplemental VI.

Forms PTO-1449 listing art accumulated by Applicant (through other sources)

Suit III was settled in October, 1999, after only preliminary activity. Specifically, claims were selected for assertion and accused operations were identified. However, the pretrial procedures did not reach a stage of substantially addressing the patents. Accordingly, none of the papers identified in Attachment C are being provided as pertinent. To that end, see letter from litigation counsel (see Attachment C1). Distinct from the attachments as identified above, some further comments are appropriate in relation to each of the suits as treated below.

2. COMMENTS ON THE VARIOUS SUITS

Suit No. I. *First Data Resources Inc. (then owner of the patents) v. West Interactive Corporation.*

In December of 1993, Suit I was resolved when the defendant took a license to the patents. During Suit I, the defendant cited a voluminous amount of art and, in particular, asserted some 50 references. Applicant has already brought all of those references to the Examiner's attention.

Certain documents listed in the Suit I summary were designated under a protective order or are otherwise not available to Applicant for review or comment. Nevertheless, the papers appear to be completely irrelevant to the issues of unenforceability, invalidity, and so on. The Suit I summary

(Attachment A) is being provided with the belief that the Examiner will request a copy of any document listed that may appear to be of interest. In the Suit I summary, documents of possible interest (designated by letters “L,” “M,” or “I”) are segregated from others that are completely irrelevant. To assist the Examiner, Applicant’s prosecution counsel have carefully reviewed and summarized the declarations by plaintiff’s expert, Mr. Rudolph, and Applicant’s counsel, Mr. Nilsson, as well as a transcript of Applicant’s deposition. *See* Attachments A2, A3, and A4. Also, Applicant’s prosecution counsel is providing a copy of the defendants’ invalidity contentions.

Suit No. II. *RAKTL (the present owner of the patents and co-plaintiff) and MCI
Telecommunications Corporation (licensee and co-plaintiff) v. AT&T*

As indicated above, certain of Applicant’s patents were the subject of litigation between the parties identified above. Litigation counsel has interacted with the defendants in Suit II. In that regard, Applicant’s prosecution counsel has not been privy to much of the litigation communication, as that which is designated under a protective order (Exhibit BIV). *See* letters (Attachment B3) from Applicant’s litigation counsel. Prosecution counsel have studied select communications between the parties in suit, not designated confidential, to determine if they appear to address issues of unenforceability, invalidity, etc. Prosecution counsel have created a Suit II Summary⁸ listing papers filed in court and/or served on either party involved in the suit. The Suit II Summary may exclude certain correspondence between litigation counsel for plaintiffs and a Special Master assigned to the case. That correspondence is not believed to be of interest to the Examiner as it relates to the scope of discovery. In the event the Examiner would like to see copies of that correspondence, please advise.

Rulings (Court’s Conclusions of Law Regarding Patent Claim Construction (hereafter CCL)), in a Markman hearing relating to Suit II should be noted. Provided before (with respect to U.S. Serial No. 306,751) is a copy of the entire court ruling (*see* Exhibit BI) followed by an expanded Table of Contents (*see* Attachment B2). That is, for the Examiner’s convenience, Applicant’s prosecution counsel have expanded the Court’s Table of Contents to indicate and summarize the defendants’ arguments and the Court’s ruling on each argument.

⁸ *See* Attachment B, Suit II Summary of Papers Filed in Court or Served on Either Party in Suit.

The art that defendants cited or asserted (in particular, see attached copies of invalidity contentions, by AT&T and UCS (Exhibits BII, and BIII) is indicated on the attached Forms PTO-1449 (Supplemental V). Other art cited only by the defendant Transtech is indicated on the attached Forms PTO-1449 (Supplemental VA). Other art that may have come to light from other sources, such as cited by Examiners in related applications also is cited on the attached Forms PTO-1449 (Supplemental VI). In addition, Applicant is providing copies of invalidity contentions by various defendants (AT&T and UCS) in the event that the Examiner should wish to consider the arguments urged by the defendants (*See* Attachments BII (contentions by AT&T), and BIII (contentions by UCS)). Applicant has already provided copies of many of the foreign patents and articles in Supplemental V and VI in related cases (for example, Serial No. 08/306,751), and is not providing copies herewith so as to not provide excessively burdensome papers. Copies of the documents cited in Supplemental VA and VII are not being provided at this point because they are largely not of interest. The undersigned assumes that copies of the patents are easily available to the Examiner online. If the Examiner would like copies of the patents, please advise the undersigned. Also, the Examiner should note that not all the references cited by the defendants constitute prior art. Filing and issue dates for the patents and publication dates of the articles and foreign patents are provided to assist the Examiner with making an independent determination of which references (if any) constitute prior art.

Although numerous issues regarding the construction of the claims arose during the litigation, those, the parties believed were most important with respect to a selected set of 20 claims were the subject of the Markman hearing. Consequently, the Markman ruling is a concise summary of plaintiffs' and defendants' significant arguments that may have also been urged in the numerous briefs and other papers filed during the entire period of the litigation. Nonetheless, Applicant's prosecution counsel also is providing abstracts prepared on the report filed by plaintiffs' expert (Mr. Sanford Morganstein, Attachment B4A) and defendants' experts (Dr. Larky, Attachment B5, and Dr. Bohacek, Attachment B6) as well as rebuttal by plaintiffs' expert (Attachment B4B).

Also, prosecution counsel is providing expanded tables of contents for various briefs (*See* Attachments B2 and B7) and comments and abstracts on other briefs (*See* Attachments B8 and B9). The comments are italicized. Also, abstracts of various deposition transcripts are provided. (*See* Attachments B10 (Larky), B11 (Morganstein), B12 (Katz)). The Examiner is requested to indicate

any particular document or area of interest in depth. If available, Applicant's prosecution counsel will provide copies.

As indicated above, Applicant's prosecution counsel received a substantial number of U.S. Patents variously identified by Defendants (AT&T and UCS only) in Suit II to Applicant's litigation counsel, for example, in response to document demands. These documents are identified in Supplemental V.

As a further matter, it is Applicant's understanding that any positions asserted during litigation that may be construed by others as unclear in view of positions urged during prosecution should be clarified. In the course of Suit II, the term "DNIS" was treated, as in its functions related to the provision of called number identification data, for example, as recited in the parent patent 5,561,707, claim 103. The various comments and contentions asserted with respect to the term "DNIS" were resolved by a ruling of the Court. Specifically, some comments are deemed appropriate with regard to the CCL (Court's Conclusions of Law).

Preliminarily, consider some quotations and comments relating to DNIS that are taken from the CCL. First, an issue arose as to whether or not signals providing the DNIS capability are restricted to a specific number of digits. In that regard, the Court stated:

"However, the mere reference to 'called number' does not restrict 'called number identification data' to a certain number of digits, nor is there reason to restrict the terms 'DNIS' and 'called number identification data' to the examples provided by Katz in the specifications." (CCL, pp. 56)

A somewhat related contention by defendants urged that the "DNIS" capability specified in the Katz claims must indicate a full or complete dialed number. In that regard, after quoting from the '707 Katz patent, the Court stated:

"These passages confirm that DNIS or called number identification data must only be a signal that identifies the called number and need not be only the seven or ten digit number." (CCL, pp. 57)

In another portion of its opinion, the Court considered Applicant's discussion of patents discussing direct inward dialing, or DID, during prosecution of certain parent patents hereto. During prosecution, for example, of U.S. patent ['707], Applicant states, referring to the DID service, that "[T]he operation was quite different from using DNIS signals to select formats". (Amendment 8/31/95, '707 Patent filewrapper). The Court specifically addressed

Applicant's discussion of DID in connection with Matthews, '012, Matthews, '906, Vij, '682 in prosecution of other related patents, the Court stated:

"These statements indicate that Katz distinguished his inventions from other patents on the basis of the comparative functions of the systems; the systems in the other patents use signals to route telephone calls, not select a format from a group of formats or to store data associated with those signals. However, Katz never informed the PTO that the same numbers that other systems used to route calls could not be used to identify the called number and select a format. In short, it is not clear from Katz' statements, contrary, to the defendants' contention, that 'internal routing numbers' to the extent they can identify the called number, could not be included in the meaning of called number identification data or DNIS, as used in the Katz patents.

Based on the foregoing, the Court concludes that the terms 'DNIS' and 'called number identification data' are synonymous and mean: a signal or data that identifies the number called."

To focus on the "comparative functions" as mentioned by the Court, some further clarification of the DNIS capability or service for the record is deemed appropriate. In that regard, the comments below also are pertinent to the testimony of Applicant's Expert, Sanford J. Morganstein. The comparative functions of the DNIS capability (versus DID service), which offer distinct benefits in Applicant's combinations, include: the use of non-specialized trunks (as in each trunk does not have to contain lines corresponding to specific DID numbers), the flexibility of number designation, the availability of flexible line allocation and the operation of supplying DNIS by addressing the carrier's DNIS database (for example, one or more memory sources located at one or more interexchange carrier locations), and the use made of signals from the network. Thus, in accordance with Applicant's prior position during prosecution, the recitation of DNIS capability in the Katz patents is deemed distinct from DID service in the contexts as claimed because of the reasons set forth above. Most obviously, DID service uses signals received over trunks devoted to specific lines within the network (a block of DID numbers) in a manner distinct from the use of DNIS signals in the Katz inventions as claimed (for example, to select a format).

Also, relating to the DNIS capability and DID service, some art was identified in Suit II, which merits comment. Specifically, for example, attention is directed to U.S. Patent 4,401,856,

Curtin et al., "Control System for Handling Direct Inward Dialing Telephone Calls" (copy attached here for convenience, Exhibit BV). Although the Curtin et al. patent, relating to DID, is not a significant addition to the art of record, it is of interest to and merits mention with regard to the above considerations. A pertinent passage from the Curtin et al. patent is as follows:

"Another possible use of the control system for handling DID lines of the present invention is to assist individuals in identifying incoming callers. Individuals can rent a block of DID numbers from the telephone company (for example, 10 numbers but still only one access line) and then use the control system so as to enable the individual user to be able to identify the incoming caller. For example, people in business have special groups of clients to whom they desire to provide special attention. By giving any particular client a particular DID number which is unpublished, when the control system identifies the particular DID number being called, the telephone user then knows which client is calling and the individual user can act accordingly. While in accordance with the preferred embodiment of the present invention, as disclosed herein, it is indicated that the last three digits of the called DID number is displayed, it is possible that the control system could display a different number of digits or the actual name of the particular client or subscriber associated with the particular DID number." (claim 3, line 41+)

Suit No. III. *RAKTL (the present owner of the patents and plaintiff) v. Microvoice Inc.*

Certain patents were the subject of litigation between the parties identified above, resolved by a consent judgment and license agreement entered in October, 1999. Prosecution counsel for Applicant is providing a Suit III Summary (see Attachment C) of all documents filed in Court or served to either party in suit (with respect to U.S. Serial No. 08/806,751). Again, any prior art identified by defendant is included in the attached Forms PTO-1449.

3. DISCUSSION OF DOCUMENTS LISTED IN SUPPLEMENTAL V, VA, VI, & VII

CHART A (SUPPLEMENTAL V and VI)

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
3,787,632 (Supplemental V)	Male et al.	01/22/74/ 06/28/71	An automatic number identification system for identifying the calling station of a branch telephone exchange and transferring the information via the normal talking path connection through the central office is described.
3,940,569 (Supplemental V)	Schonbrun et al.	02/24/76/ 08/08/73	Toll call restriction is based on a binary counting of the dial pulses of the called number.
3,987,252 (Supplemental V)	Vicari	10/19/76/ 06/27/75	Computer controlled concentrator to reduce the number of trunk lines for serving subscribers. Operators can answer any incoming call (any subscriber line) to take a message or give a message. Calls are diverted to "free" operator position. The patent describes an early form of "call center" with call distributions.
4,068,099 (Supplemental V)	Mikkola et al.	01/10/78/ 05/21/76	A system for multiplexing (time division) calls for special service (e.g. news, weather, etc. by recorded message). Callers are multiplexed for receiving service information.
4,087,638 (Supplemental V)	Hayes et al.	05/02/78/ 10/01/76	A DTMF generator uses a dual oscillator (digital waveform synthesizer) to produce two output sine waves and is selectively timed to provide DTMF signals along with "ANI" signals (4 or 8 digits) that are inserted at the outset of operation.
4,090,034 (Supplemental V)	Moylan	05/16/78/ 06/09/77	PBX billing system based on ANI, as for hotel use to bill guests.
4,160,129 (Supplemental V)	Peyser	07/03/79/ 05/03/77	Long distance routing control system with priority selection of lines and a connection through the selected lines that does not pass through the central control that selects the lines. Satellite switching units are used. Data for billing is recorded.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
4,192,972 (Supplemental V)	Bertoglio et al.	03/11/80/ 11/28/78	A pay-telephone station that handles local and long-distance calls includes a microcomputer which, at the end of the conversation or under certain circumstances, selectively collects predeposited payment items of different denominations calculated according to the debt incurred and to the denominations available to optimize the refunding of any excess to a user. The microcomputer also determines, upon the start of a call, whether the initial deposit suffices for at least the basic charge on the type of connection (local or trunk call) sought to be set up and, if it does not, invites the user to make an additional deposit before aborting the call. The remaining credit balance is continuously signaled to the caller on a display unit and, even before actual collection, is diminished according to the applicable rate in response to each metering pulse arriving from the exchange.
4,221,933 (Supplemental V)	Cornell et al.	09/09/80/ 12/21/78	Centralized voice message system uses digital memory to store messages. ESS trunk circuits are incorporated with interface units to store and retrieve, using ANI to identify callers (col. 4, ln. 1).
4,255,619 (Supplemental V)	Saito	03/10/81/ 09/05/79	Telephonic reservations system uses a data transmitter 41 coupled to a telephone to interface the reservations system. See col. 9 for script. As related to Katz systems, the Saito system appears to be no more than a basic reservations system using a special data transmitter with a keypad.
4,360,875 (Supplemental V)	Behnke	11/23/82/ 02/23/81	Special purpose terminals (keyboards) interface a central computer to arrange rides on vehicles (private cars) which have drivers planning a trip.
4,401,856 (Supplemental V)	Curtin	08/30/83/ 05/13/81	Operating with DID lines, the last digits of the called number are decoded and displayed (col. 10, ln. 12). Also, display could be of a particular client as disclosed (col. 3, ln. 59).
4,428,296 (Supplemental V)	Scheuchzer et al.	01/31/84/ 08/04/81	A railroad track relaying train.
4,445,001 (Supplemental V)	Bertoglio	04/24/84/ 03/02/82	Subscribers are equipped with structure to interrogate an identification unit to reveal a calling number which is provided as a signal to activate a display at the equipped subscriber location.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
4,517,412 (Supplemental V)	Newkirk et al.	05/14/85/ 11/23/83	Pay phones are equipped with major credit card reader units to read cards, communicate through a satellite station to a central processor for verification and perform network management plus credit card billing.
4,518,824 (Supplemental V)	Mondardini	05/21/85/ 06/07/82	A public telephone method and apparatus is described wherein the user's personal telephone number and a personal dialing code are used to effect debiting charges.
4,549,291 (Supplemental V)	Renoulin et al.	10/22/85/ 09/09/83	A hybrid local communication network, operating both in circuit and packet modes.
4,585,903 (Supplemental V)	Schiller et al.	04/29/86/ 06/25/84	A cordless telephone.
4,591,665 (Supplemental V)	Foster et al.	05/27/86/ 07/12/83	To trace absence calls, a calling number is stored in a memory associated with the called number and is displayed at the called number on request by entry of a post call code.
4,600,809 (Supplemental V)	Tatsumi et al.	07/15/86/ 05/24/84	A wireless system with DTMF decoding to take messages for an unattended telephone and indicate the calling number.
4,611,096 (Supplemental V)	Asmuth et al.	09/09/86/ 12/01/83	Local telephone office capability to either "hand off" or obtain "assist" in giving service as CTI, e.g. airline telephone service. See "Announcements and Digit Collection" (col. 7); also, "Assist and Handoff" (col. 9).
4,625,081 (Supplemental V)	Lotito et al.	11/25/86/ 11/30/82	Messages are stored in baskets that are associated with individual telephone lines and received with PIN entry and little operator involvement. Selective "answering" per number of rings, time of day, etc. (col. 150, ln. 65). Interface operation (col. 151). Re service options, see col. 158, ln. 1. Re message delivery, see col. 169, ln. 66.
4,640,991 (Supplemental V)	Matthews et al	02/03/87/ 09/29/82	(also see Matthews '486) Voice mail system with: controlled limited access, digital or public network link, etc. DID (col. 69, ln. 25, see Matthews '486). Receive only (RO) message address is used.
4,672,660 (Supplemental V)	Curtin	06/09/87/ 06/07/85	A method and system for identifying who is placing a call to a telephone prior to answering. Also, discloses DID.
4,685,127 (Supplemental V)	Miller et al.	08/04/87/ 10/01/85	Uses ANI to identify callers on long distance calls and thereby select the chosen long distance carrier for the call.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
4,747,124 (Supplemental V)	Ladd	05/24/88/ 05/06/85	A computer unit with speech capability is coupled in front of a PBX to expand its capability. DTMF signals from caller are decoded to control PBX.
4,759,056 (Supplemental V)	Akiyama	07/19/88/ 11/09/84	A communication system offering specific services to specific persons has a portable memory device with a record of personal information such as the bearer's identification number, class of service, personal date etc. In making a call, the bearer of the memory device puts it on a communication terminal device and the terminal device reads out the personal information, which is transferred to a data processor such as a central processor in exchange so that a service specific to the calling person is rendered.
4,761,808 (Supplemental V)	Howard	08/02/88/ 03/18/87	As for controlling access to long distance calls, a caller uses an I.D. number (alphabetic) including a time code and an address code. The time code is changed in an autodialer to limit access.
4,791,666 (Supplemental V)	Cobb et al.	12/13/88/ 06/19/87	A method and apparatus for connecting on electromechanical telephone central office having a step-by-step or cross bar type switching equipment to a remotely located automatic interrupt message system.
4,797,818 (Supplemental V)	Cotter	01/10/89/ 03/26/87	A pizza chain ties all parlors to a central computer, using modems at the central and printers at the parlors. Orders are taken at the central and on the basis of area code, zip code, exchange number or street address, a parlor is selected. The order is printed. Disclosed embodiment uses home address, per "Informix" database. Calls go to operator at CRT, however, voice recognition etc. is mentioned (col. 4, ln. 52). Also "sequential transaction numbers" are assigned for each store (col. 4, ln. 60).

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
4,805,207 (Supplemental V)	McNutt et al.	02/14/89/ 09/09/85	This patent relates to a system that takes and retrieves telephone messages. Their system allows one or more operators to receive calls to a called party who is not able to answer the phone. Information specific to the called party is presented to the operator in response to conventional data from a PBX indicating the called party, and optionally the calling party in some cases. The operator may take a message for the called party by typing the message on a terminal, which is stored. Messages that are stored may be retrieved through a remote station.
4,878,240 (Supplemental V)	Lin et al.	10/31/89/ 01/25/88	Enhanced telephone services are provided through a multi-service telephone switching system that contains a programmable adjunct connected to a telephone switching system. Different service scripts can be invoked to provide corresponding different enhanced services to the subscriber depending upon the specific condition for which the call was routed to the adjunct and/or a specific event occurring during the call.
4,893,325 (Supplemental V)	Pankonen et al.	01/09/90/ 09/23/88	A telephone call distribution system for handling a special type call, the call containing at least automatic number identification (ANI) data.
4,896,346 (Supplemental V)	Belfield et al.	01/23/90/ 11/21/88	A password controlled switching system and method of operation for enrolling and storing passwords identifying lines and trunks of the switching system that are denied access by other lines. The system is operable upon a watch of a calling party command with an enrolled and stored password for selectively interconnecting the calling party via a line with ones of the restricted lines and trunks.
4,899,373 (Supplemental V)	Lee et al.	02/06/90/ 11/28/86	This patent relates to a method and apparatus for providing personalized telephone subscriber features at remote locations. A nationally accessible data base system stores features data in association with personal identification numbers.
4,908,852 (Supplemental V)	Hird et al.	03/13/90/ 01/23/89	A telephone system and method of operation which use a microprocessor control system (10), a speech generator (34) and speech memory (46) to automatically place calls without the need of a live operator.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
4,922,519 (Supplemental V)	Daudelin	05/01/90/ 09/30/88	The class of an operator assistance call is identified in order to reduce the operator work time for servicing such a call. A customer dials 0 or dials 0 plus a directory number and is connected to a program controlled operator assistance system or switch. The switch initially connects the calling customer to a voice processing unit and prompts the customer to speak a command or key a command code. The command or command code is recognized and used to direct the flow of the control program to selectively defer a connection to an operator position. For example, for person-to-person calls, the operator position is only connected after the called customer terminal answers.
4,933,965 (Supplemental V)	Hird	06/12/90/ 01/23/89	A telephone system and method of operation are described which use a microprocessor control system, a speech generator and speech memory to interact with a calling party placing a long distance phone call. The telephone determines the validity of the billing account number and, if the billing account number is valid, a communication path is established through a telephone line interface. Valid billing account numbers are stored in the telephone for a predetermined period of time. The stored numbers are polled prior to the validation process to determine if an entered number has already been validated. In this manner, a calling party making multiple calls with the same billing account number need only wait for his account number to be verified once.
4,989,234 (Supplemental V)	Schakowsky et al.	01/29/91/ 04/11/89	A system for capturing telephonic mass responses that automatically receives calls of recipients crossing their telephone sets to respond to the broadcast promotion, electronically capturing the subscriber telephone numbers of the telephone sets through which these calls are made, and automatically confirming to all callers while on line during these calls that these calls have been received.
5,036,535 (Supplemental V)	Gechter et al.	07/30/91/ 11/27/89	An automatic call distributing system for automatically distributing telephone calls placed over a network to one of a plurality of agent stations connected to the network.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
5,199,062 (Supplemental V)	Von Meister et al.	03/30/93/ 11/08/91	A telephone communication system with a telephone switch having a plurality of incoming and outgoing lines for switching calls, an audio response unit, and a central processing unit for executing a stored program sequence based upon the audio communication received by the voice response unit to control both the voice response unit and the telephone switch. (later filed patent)
5,222,120 (Supplemental V)	McLeod et al.	06/22/93/ 04/23/90	A long distance telephone switching system that provides various enhanced subscriber services, such as on audio news and information service etc. (later filed patent)
5,299,260 (Supplemental V)	Shaio	03/29/94/ 07/29/93	A telephone call handling system. (later filed patent - not prior art)
5,303,298 (Supplemental V)	Morganstein	04/12/94/ 09/14/92	An automated attendant call processor. (later filed patent)
5,303,299 (Supplemental V)	Hunt et al.	04/12/94/ 06/22/92	A method for continuous recognition of alphanumeric strings spoken over a telephone network. (later filed patent)
5,354,069 (Supplemental V)	Guttman et al.	10/11/94/ 01/21/92	A lottery simulation system. (later filed patent)
5,418,844 (Supplemental V)	Morrissey et al.	05/23/95/ 04/17/92	An automatic access to information service provider. (later filed patent)

Friedes, A., et al., "ISDN opportunities for large business - 800 service customers," IEEE International Conference on Communications '86, June 22-25, 1986, Vol. 1, pp. 28-32 (Supplemental VI)	June 22-25, 1986	ISDN capabilities as enabling 800 routing and increased customer control are described which use two "networks," one for call transport and one for signaling. ANI is discussed. D-channel information sharing is discussed, as to route calls, collect data on the waiting queue size, screen hackers with ANNIE, select data transmission paths, identify and selectively treat callers, based on called number, redirect calls.
Allyn, Mark R. et al., "Planning for people: Human factors in the design of a new service," Bell Laboratories Record, May 1980, pp. 155-161 (Supplemental VI)	May 1980	A test automated credit card service is described which tested various protocols from the perspective of human factors, e.g. announcements, custom response time, errors, etc.
Hanson, Bruce L., et al., "No. 1A VSS New custom calling services," Bell Laboratories Record, June 1980, pp. 174-180 (Supplemental VI)	June 1980	Call routing in an answering system with various tests and directions.

CHART A1 (Supplemental VA)

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
3,553,378 (Supplemental VA)	Solomon, et al.	01/1971	Data bank access by telephone wherein, on connection, caller is given a dial tone to cue for dialing identity of desired information. Proper dial pulses fetch desired data, then connection is opened.
3,829,628 (Supplemental VA)	Tripsas	08/1974	A system for testing the ANI, as it is used for billing purposes, to indicate failures for a test person.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
4,565,903 (Supplemental VA)	Riley	01/1986	System routes inter-exchange calls to a specific carrier based on signals dialed by a caller or by reference to a memory associated with the calling link.
4,581,486 (Supplemental VA)	Matthews, et al.	04/1986	Voice message system for a PBX also affording limited access to "non-users" under control of a user. A group of select message addresses can be designated to receive a message collectively. Group members may reply which replies go to all the group members.
4,750,199 (Supplemental VA)	Norwich	06/1988	From a cluster of telephone instruments (as a group of a PBX) when a frequently-dialed number is called (as to a credit service) before termination, other instruments in the group are polled to determine if they want the connection (saves connection charge).
4,761,807 (Supplemental VA)	Matthews, et al.	08/1988	Voice mail system interconnects multiple PBXs of subscribers with controls for "on net" or "off net" use by subscribers. Users can leave messages or check for messages with password. Users are cued by recorded messages. User voice characteristic features to qualify along with ID codes.
4,782,519 (Supplemental VA)	Patel, et al.	11/1988	Central office system uses ANI to ID callers, then if call requires extended service (as requiring equal access) the fetched data is used to route the call.
4,785,473 (Supplemental VA)	Pfeiffer, et al.	11/1988	Voice message system accommodates DTMF commands. Messages are stored in portions or segments for greater flexibility.
4,799,255 (Supplemental VA)	Billinger, et al.	01/1989	System uses ANI to keep a record of unauthorized communication attempts and limiting such to a predetermined number. Purpose is to block an illicit caller using various codes until a hit is accomplished.
4,856,066 (Supplemental VA)	Lemelson	08/1989	Spoken words generate codes which address a memory to record or fetch messages which are composed of spoken words. Codes are identified by computer.
4,932,021 (Supplemental VA)	Moody	06/1990	Repeated entry of commands to define a path to access a service, results in storing the path and offering it to the user as a "short cut" to the service.
4,951,307 (Supplemental VA)	Willard	08/1990	Telephone answering machine offers a touch tone choice of persons to receive message.
4,959,855 (Supplemental VA)	Daudelin	09/1990	In a directory assistance system, caller is offered the option of the located number being dialed.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
5,033,076 (Supplemental VA)	Jones, et al.	07/1991	ANI number display at called station along with call screening.
5,033,088 (Supplemental VA)	Shipman	07/1991	In a speech recognition system, if speech is not recognized after two inputs, a recorded form is delivered to an operator, possibly for input to further the task.
5,054,059 (Supplemental VA)	Stern, et al.	10/1991	A telephone interface system for specialized installations (hospital, etc.) incorporating select control functions.
5,125,024 (Supplemental VA)	Gokcen, et al.	06/1992	Telephone interface with interruption of a cue in transmission by a caller, prompting the next cue.
5,148,474 (Supplemental VA)	Haralambopoulos, et al.	06/1992	In a value-added operation, caller can bill to another number, also ANI screen pop.
5,164,981 (Supplemental VA)	Mitchell, et al.	11/1992	Caller who is denied access to host system is transferred to operator who also received a display of the contents of a "transaction memory". In view of the elements in applicant's claims involving operator displays and the priority dates, the reference is not pertinent.
5,168,548 (Supplemental VA)	Kaufman, et al.	12/1992	In a speech recognition system, input is reduced to image data for fax transmission.
5,179,585 (Supplemental VA)	MacMillan, Jr., et al.	01/1993	A voice message system uses modules for different operations, e.g. bulletin board, voice mail, networking, etc.
5,181,236 (Supplemental VA)	LaVallee, et al.	01/1993	Messaging system with message delivery and telephone number notice for call return.
5,186,471 (Supplemental VA)	Vancraeynest	02/1993	Gaming system uses PTMF both for remote station and central to facilitate a match test.
5,214,689 (Supplemental VA)	O'Sullivan	05/1993	A transportation information system that searches memory to locate "closest" trip to the time specified by a telephone inquiry.
5,236,199 (Supplemental VA)	Thompson, Jr.	08/1993	A system for using a conventional telephone keypad to simulate a mouse, joy stick and so on, for interface use.
5,289,531 (Supplemental VA)	Levine	02/1994	A scheduling system for appointments by telephone (interactive) whereby time slots are filled by computer.
5,327,554 (Supplemental VA)	Palazzi, III, et al.	07/1994	System uses telephone and television receiver to facilitate interactive communication with a host computer.
5,361,295 (Supplemental VA)	Solomon, et al.	11/1994	An interactive telephone system buffer for interfacing parties without revelation of their telephone numbers. Uses DID embedded in used number.

<u>U.S. Patent No.</u>	<u>Inventor</u>	<u>Issue Date/ Filing Date</u>	<u>Comments</u>
5,369,685 (Supplemental VA)	Kero	11/1994	A personal voice activated telephone directory uses network storage with verified access to reveal telephone numbers.
5,416,830 (Supplemental VA)	MacMillan, Jr., et al.	05/1995	For voice messaging, modules (bulletin board, voice mail, networking, etc.) are used to process voice.
5,511,112 (Supplemental VA)	Szlam	04/1996	Outbound call processor schedules calls for agents according to rank and priority.
5,537,143 (Supplemental VA)	Steingold, et al.	07/1996	For use with a television receiver and a telephone, the system enables interactive communication in a gaming format.
5,561,710 (Supplemental VA)	Helms	10/1996	A device for providing alphanumeric representations from a keypad that generate DTMF signals in sequences.
5,623,536 (Supplemental VA)	Solomon, et al.	04/1997	Another anonymous interface system per 5,361,295
5,651,048 (Supplemental VA)	Leeuw	07/1997	A switching arrangement with a charge circuit to control state.
5,768,348 (Supplemental VA)	Solomon, et al.	06/1998	Another anonymous patent, see '536 and '295.

Dix, John, "AT&T Tries Different Tack," Computerworld, November 25, 1985, p. 19 (A21708097) (Supplemental VII)	November 25, 1985	Story on AT&T coupling for peripherals.
Dix, John, "AT&T Unleashes 'Gazelle,'" Computerworld, April 30, 1984, p. 2 (A21708710) (Supplemental VII)	April 30, 1984	AT&T introduces a voice/digital PBX.
Dix, John, "Enhancements Out for AT&T's High-End PBX," Computerworld, November 12, 1984, p. 99 (A21708970) (Supplemental VII)	November 12, 1984	Story on AT&T's high end PBX, as for voice mail.
Brown, Jim, "VMX 5000 Series: Voice Messenger Debuts," Network World, October 13, 1986, p. 6 (A21706653) (Supplemental VII)	October 13, 1986	Story on AT&T's high end PBX, as for voice mail.
Dix, John, "Ford Motor Co.; Driving Down Costs with Voice Mailboxes," Network World, July 14, 1986, p. 32 (A21706326) (Supplemental VII)	July 14, 1986	Story on Ford Motor using voice mail.
Dix, John, "'Hello, This is a Voice Mail Recording,'" Network World, July 14, 1986, p. 1 (A21706331) (Supplemental VII)	July 14, 1986	Story on voice mail possibilities and human engineering.
Dix, John, "Rolm; Long-Awaited Redwood to Debut at ICA Today," Network World, June 2, 1986, p. 4 (A21708493) (Supplemental VII)	June 2, 1986	Story on Rolm Corp.'s telephone switch for use as a key system or PBX.
Dix, John, "Switch Management: DEC Tools Debut at ICA," Network World, June 9, 1986, p. 8 (A21708497) (Supplemental VII)	June 9, 1986	Story on digital Equip's new PBX software.
Dix, John, "Unified Messaging; AT&T Reveals New Message Blueprint," Network World, September 22, 1986, p. 1 (A21706473) (Supplemental VII)	September 22, 1986	Story discusses AT&T plan to integrate electronic mail, voice mail, and image mail.
Dix, John, "Voice/Data PBXs: More than	April 23, 1984	Story on companies using PBXs to switch

<u>Title of Article/Publication</u>	<u>Date</u>	<u>Comment</u>
Today's Users Need?," Computerworld, April 23, 1984, p. 14 (A21708669) (Supplemental VII)		data.
"Dollars from Dialing," Fortune, March 16, 1987, p. 10 (A21707648) (Supplemental VII)	March 16, 1987	"Fortune" article on Pepsi Superbowl and related telephone operations.
Dorros, Irwin, "Evolving Capabilities of the Public Switched Telecommunications Network," Business Communications Review, January-February 1981 (A21725652) (Supplemental VII)	January-February 1981	Article on expanded PSTN as regarding: DSD, CCIS, 800 service, locator service, etc.
Dowd, Ann Reilly, et al., "Dollars from Dialing," Fortune, March 16, 1987, p. 10 (A21707869) (Supplemental VII)	March 16, 1987	Story on interface operations, e.g. Pepsi football.
Drinkwater, Larry, "Voice Processing: An Emerging Computer ? Technology," Speech Technology, August-September 1984, pp. 50-54 (A21708826) (illegible) (Supplemental VII)	August-September 1984	Article on voice synthesis and voice recognition.
Edwards, M., "Digital PBXs Zero in on the Key Role as Hub of Office," Communications News, Volume 21, Number 12, December 1984, p. 44 (A21708992) (Supplemental VII)	December 1984	Story on expanded use of digitalized PBXs.
Egly, Diana G., et al., "Mnemonic Aids for Telephone-Based Interfaces," Proceedings of the Eleventh International Symposium on Human Factors in Telecommunications, September 1985 (A21725818) (Supplemental VII)	September 1985	Paper on mnemonic aids for telephone interface, that is, key pad entries.
Eichenwald, Kurt, "Just a Phone Call Away: More Dial-It Services," The New York Times, April 16, 1988 (A21725852) (Supplemental VII)	April 16, 1988	Story on uses of CTI.
Excerpt from Electrical Communication Facilities (in Japanese), Volume 33, Number 9, 1981 (A21724248) (Supplemental VII)	1981	Apparently a paper on CTI.
"Electronic Switching: Digital Central Office Systems of the World," Edited by Amos E. Joel, Jr., IEEE Press, 1982 (A21716673) (Supplemental VII)	1982	IEEE book on digital switching, describes several specific switches, e.g. 4ESS, DMS10, etc.
"Electronic Voice Mail Revolutionizing Communications," Tulsa Business Chronicle, Volume 5, Number 26, June 30, 1986 (A21708510) (Supplemental VII)	June 30, 1986	General comments on voice mail.

<u>Title of Article/Publication</u>	<u>Date</u>	<u>Comment</u>
(Supplemental VIII)		products, applications and business related news
Complete Issue of Voice News, Volume 7, Number 10, October 1987 (A21724749) (Supplemental VIII)	October 1987	Voice mail newsletter relating to Dytel patent, call answer and cue, number translation, routing and greetings. Also, letter mentions new voice mail related products and developments, business and legal news

From the documents listed above, the following examples are isolated and briefly discussed to indicate the extent of interest that they may have to Applicant's claims. For the Examiner's convenience, copies of these documents are being provided.

DOCUMENTS:

1. "AT&T's Flagship System 75: A Comprehensive Analysis of the System 85's 'Little Cousin,'" Telecommunications Product Review, Volume 11, Number 7, July 1984 (A21724612) (Supplemental VII)

The article reveals features of AT&T's "most technically sophisticated" switch for terminal support. The switch has: stored program control, "voice" capability, digital switching, queuing control, etc. However, the switch falls for short suggesting the interface functions and capabilities as claimed by the Katz patents.

2. AT&T Technical Journal – The 5ESS Switching System, Volume 64, Number 6, Part 2, July-August 1985 (A21723626) (Supplemental VII)

The AT&T Technical Journal for July-August (see Contents pp. 1303 – herewith) was dedicated to the 5ESS Switching System, and consisted of several papers on the unit. Most of the papers are directed to the switch per se and accordingly are of no interest here. However, some of the papers could be of some interest and copies are provided. Operational Software (pp. 1357-1384) Data base management is explained (pp. 1364) along with administrative services (pp. 1375).

Accordingly, capabilities to collect and process data are revealed, the paper does not suggest specific functions or capabilities as would be pertinent to the Katz claims. Hardware Design (pp. 1417-1437) The paper explains messaging capability and subscriber interface, however, again there are no suggestions beyond broad statements of capability in relation to telephonic interface systems.

3. Greene, James E., et al., "Voice Response System Sticks to the Script and Saves Time, Money and Tempers for University Students and Administrators," Communication Age, January 1986 (A21724080) (Supplemental VII)

The article describes a 1985 telephonic course at the Georgia State University. Although the Operation was historically of interest to computer telephone interface operations, it was only one step beyond information retrieval. However, information was received, acknowledged, and stored.

4. "'Teleguide' Network Gives Tourists the Answers," ComputerData, April 1983 (A21724569) (Supplemental VII)

Article describing an information retrieval system implemented in Canada in the early eighties. Using CRT terminals to receive tourist information. Although the system is interactive, it is distinct as performing merely information retrieval functions.

U.S. PATENTS:

5. U.S. Patent No. 4,799,255 to Billinger et al (Supplemental VA) (filed January 30, 1987, issued January 17, 1989)

As used, ANI is not a consumable key for accessing, but rather an identification to count "bad" attempts to access from a telephone requiring an access code. The system fits the category of tallying "bad tries" to a limit, then restricting the path. The calling number (ANI) as tallied, is not to control access in the manner of consumable key, but rather is used merely to identify the source of calls failing to identify a valid authorization code (C 3, L 38) when such a code is needed for access (C 7, L 42).

6. U.S. Patent No. 5,148,474 to Haralambopoulos et al. (Supplemental VA) (filed August 21, 1991, issued September 15, 1992)

The reference discloses a system for telephonically serving callers with information displayed from a memory to an operator, as a medical technician at a facility where the caller is a patient (C 4, L 39). Essentially, the system interfaces the patient preliminarily to gain identification to fetch and display data for the technician. Alternately, the call is terminated or given to a receptionist (C 4, L

38). In view of the priority data and the substance of applicant's claims, the disclosure is of no pertinence.

FOREIGN PATENTS:

7. PN: 217,308, GD: 12/12/1990, EPA (Specification) (Supplemental VI)

Sept. 30, 1985 (U.S. 781895) The EPO specification discloses a pay-per-view system using telephonic interface, however, which is distinct by reason of not using a network connection to a vendor of the service (see Col. 10, lines 15-23).

8. EP 0 382 670 B1 (Supplemental VA) (published August 16, 1990)

Although the system discloses a state machine, the states (see C 5, L 30) and their functions are quite distinct from applicant's claimed systems involving status registers to control audio recording.

4. CONCLUSION

The items identified in this Information Disclosure Statement may or may not be “material” pursuant to 37 CFR § 1.56. The submission of these documents by Applicant should not be construed as an admission that any such patent, publication or other information referred to in these documents is material or considered to be material (37 CFR § 1.97(h)), or even qualifies as “prior art” under 35 USC § 102 with respect to this invention, unless specifically designated by Applicant as such.

The filing of this Information Disclosure Statement should not be construed to mean that a search has been made or that no other material information, as defined in 37 CFR § 1.56, exists.

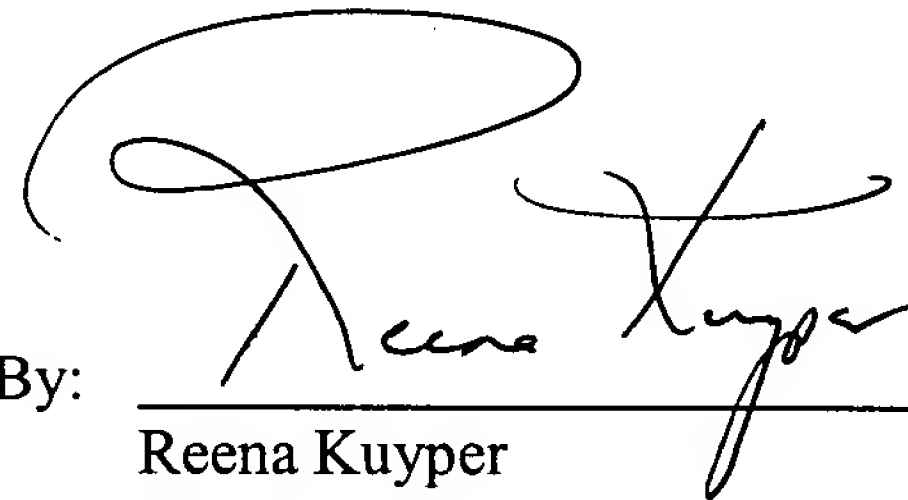

This Information Disclosure Statement is being filed in accordance with 37 CFR §§ 1.97(c) and 1.98. This IDS is being filed after an action on the merits but before a Final Action under § 1.113 or a Notice of Allowance under § 1.311. A check in the amount of \$180.00 to cover the fee pursuant 37 C.F.R. 1.17(p) is enclosed. The Examiner is hereby authorized to charge any deficiencies or any additional fee required by this paper to A2D L.P.'s Deposit Account No. 50-1636.

Respectfully submitted,

Dated:

May 22, 2001
